

DATA XRAY

DATA RIGHTS REQUESTS

Weighed down by data subject requests? The Data X-Ray can return results from across your estate in seconds.

Start searching immediately

The Data X-Ray is designed so that you can get going straight away. It takes seconds to integrate with all major structured and unstructured datasources and it also supports a full range of file types. No-integration options are also available with our drag and drop freemium service at xray.ohalo.co.

Search across your data estate in seconds

The Data X-Ray's machine learning powered search functionality lets you quickly and efficiently find specific data elements that correspond to individual data subjects in a matter of seconds, eliminating false positives and providing you with the confidence that you need to respond effectively to the data subject.

Consistent and comprehensive analysis

The Data X-Ray's automated algorithmic analysis of your data estate, in comparison to alternative manual or semi-automated processes, provides a highly consistent and comprehensive level of accuracy across the whole of your data estate, helping you to deliver the legal certainty you require.

Review, redact and export data for request response

Once the Data X-Ray has identified and located data relevant to the subject, you can then review, redact and export the data from the application for onward delivery to the data subject.

REQUEST RESPONSE IN PRACTICE

A powerful solution for responding to data subject requests - identify, locate and extract relevant personal data in seconds

When a data rights request lands, all the data that you hold is potentially in scope. With the statutory timetable ticking, where do you start?

Most organisations try, and often fail, to respond through manual or at best semi-automated processes that depend on lengthy, hard-to-organise email chain enquiries.

Even when the results are finally returned, there is little comfort for the responder that the analysis has been discharged to the appropriate level of consistency, comprehensiveness and accuracy.

The Data X-Ray approach

The Data X-Ray relieves these burdens by automating your data rights request response, no matter what form the data takes or where it is located. Integration takes seconds and once complete you can start searching across your data estate immediately.

Our machine learning powered search functionality offers you total confidence in the consistency, comprehensiveness and accuracy of your search results, providing the kind of certainty that no manual or semi-automated process can.

Once you have identified relevant personal data from your search results that fall in scope of the request, and should you be dealing with an access request, you can then extract and/or redact that data before final review and onward export to the data subject.
